SUMMARY

Software engineer with six months of production experience building and debugging backend services that handle around 1,000 payments a day. Works across Java and Spring Boot, Node.js and TypeScript, React, and Python, with four deployed projects and 900+ solved coding problems behind the fundamentals. Comfortable picking up unfamiliar codebases and tools quickly. MCA from NIT Raipur.

EDUCATION

National Institute of Technology, Raipur

Aug 2023 – May 2026

Master of Computer Applications (MCA)

Raipur, Chhattisgarh

Relevant coursework: Data Structures & Algorithms, Operating Systems, DBMS, Computer Networks, Distributed Systems

Adikavi Nannaya University

Jun 2019 – May 2022

B.Sc. Computer Science

Rajahmundry, Andhra Pradesh

TECHNICAL SKILLS

Languages: Java, Python, JavaScript (ES6+), TypeScript, C++, SQL

Backend: Spring Boot, Node.js, Express.js, NestJS, REST API design, microservices, event-driven architecture, message queues (BullMQ), third-party API integration

Frontend & Web: React.js, HTML5, CSS3, reusable component design, state management, asynchronous data fetching, JSON

Databases: PostgreSQL, MongoDB, Redis, SQL, schema design, indexing, query optimisation, caching

AI & ML: LangChain, RAG, vector databases, Hugging Face, Google Gemini API, TensorFlow, PyTorch, scikit-learn, pandas, NumPy

Cloud & DevOps: AWS, Docker, Git, GitHub, GitHub Actions, CI/CD, Vercel, Render, Postman

Fundamentals: Data structures and algorithms, object-oriented programming, system design, design patterns, complexity analysis

Practices: Agile and Scrum, code reviews, unit and integration testing (Jest, JUnit), debugging and root cause analysis, technical documentation

EXPERIENCE

Antino Labs Pvt. Ltd., Software Development Intern, Backend Engineering

Jan 2026 – Jun 2026

Backend, Payments & Integrations

Bengaluru, Karnataka

- **1,000+ payments a day** run through backend services I built, connecting an internal platform to two outside payment companies that each had their own request format and error handling.
- **30% fewer failed payments.** Payments were failing at random and some customers were charged twice. I reproduced the fault, traced it to endpoints that could not handle the same request arriving more than once, and rebuilt them to recognise and ignore repeats.
- **6 payment methods behind one interface,** with new providers addable without rewriting what already worked, because each plugs in as a separate module.
- **50+ machines kept in sync** by four services I built, exchanging live data with hardware over a secure channel on AWS.
- **80%+ automated test coverage** on the services I owned, shipped through Agile sprints with peer code reviews and releases that never took the system offline.

PROJECTS

Rivora, collaborative recording platform

github.com/NagaSaiRam89/rivora-spring

Java, Spring Boot, JUnit, React.js, Node.js, MongoDB, Redis, BullMQ, FFmpeg

- **Built end to end in Java and Spring Boot** with REST services, MongoDB storage, Redis caching, and a React interface on top.
- **40% faster responses.** Heavy media processing was holding up every request while it ran, so I moved that work into the background and users now get an answer immediately.
- **Zero recordings lost across 100+ sessions** on unreliable connections, because audio saves in small pieces that retry on their own and stitch back together when the connection returns.

Trash-Clash, full stack platform, live on Render and Vercel

github.com/NagaSaiRam89/TrashClash

React.js, Express.js, Node.js, PostgreSQL, JWT, GitHub Actions, Jest

- **Shipped solo across the whole stack:** 15+ REST endpoints over an 8-table database, plus the React interface, logins, and permissions on top.
- **Deployed automatically on every push** through GitHub Actions, with the test suite at 75%+ coverage catching regressions before they reach production.

SnapStudy AI, document processing app

github.com/ramhere939/snapstudyai

React.js, TypeScript, Google Gemini API, Tesseract OCR, PDF.js. **1st place, solo,** at Connect N Code Hackathon 2026, sponsored by Google Gemini, idea to deployed demo inside the competition window.

Projects in 21 Days, AI and ML portfolio

github.com/NagaSaiRam89/21_daysML

Python, LangChain, TensorFlow, PyTorch, scikit-learn, n8n. **21 AI projects** built from raw data to working result, **certified by GeeksforGeeks.**

OPEN SOURCE, ACHIEVEMENTS & CERTIFICATIONS

- **Open Source:** Code accepted into GirlScript Summer of Code 2026 (GSSoC) after review by the project maintainers.
- **Problem Solving:** 600+ LeetCode and 300+ GeeksforGeeks problems solved; 160+ day unbroken streak.
- **Certifications:** Postman API Fundamentals Student Expert; AI & ML, NIT Kurukshetra; Full Stack Development, Udemy.
